

# DryEasy Bedwetting Alarm with Volume Control, 6 Selectable Sounds and Vibration Review-2021

[Read Customer Reviews](#)

New and improved toggle clamp locks the sensor securely in place. Reliable sensor detects the first drop of urine and alerts the child as soon as bedwetting occurs.

6 sounds to suit users' preference and avoid users from getting used of a particular sound. With options to choose a single sound or play the 6 sounds at random.

4 levels of digital volume control to cater to different needs. Support max. loudness of 85 db.

Operation modes including sound plus vibration, sound only and vibration only.

CE certified, ISO 9001:2008 and ISO 13485 (for medical devices). How does DryEasy bedwetting alarm work?

Our bedwetting alarm is a device used to train the users to respond to a full bladder by waking. It consists of a moisture sensor and an alarm unit. The moisture sensor which has to be attached to the user's underpants will trigger the alarm to go off as soon as bedwetting occurs. The user can then wake up and use toilet. Such process can gradually condition the brain to respond to the messages from the bladder and eventually overcome bedwetting problem.

#### 5 Essential Features

Volume control- DryEasy provides 4-level volume control which caters to different needs.

Selectable sounds- Unlike most bedwetting alarms which offer one sound or a few non-selectable sounds, DryEasy provides 6 selectable sounds to suit users' preference and avoid users from getting used to a particular sound.

Random playing- Some users may not respond to the alarm due to inertia. Our random playing feature helps to avoid this phenomenon.

Different operation modes- Operation modes include sound plus vibration, sound only and vibration only.

Detachable cable- Replacement cable can be bought separately without having to buy a whole new unit.

#### Remarkable sensor

##### Highly sensitive

Our sensor is highly sensitive. The alarm can even be activated by touching the sensor with a wet finger.

##### Securely attached to underpants

We have applied the technique of toggle clamp on our sensor which makes it easy to be attached securely to underpants.

##### Easy to clean and dry

With an open-cover design, our sensor is very easy to be cleaned and dried.

Value added accessory provided: DryEasy bedwetting alarm can be attached either to the pyjamas top or to the arm.

Attached to the pyjamas top

Attached to the arm

Adjustable armband included

#### Tips for using bedwetting alarms

1) Parents play an important role in particular at the initial stage of alarm treatment in waking your child as soon as the alarm goes off and are therefore recommended to sleep in the same room with your child for the first 2 weeks of using the alarm. Gradually, the child will be able to respond to the alarm on his/her own.

2) The position of the sensor is important. For boy, it could be better to clip the sensor to the inside flap of their underwear as the sensor can detect the urine quicker. For girls, the sensor should be attached on the crotch area since it is most likely to get wet first.

3) The underwear should be close fitting which is closer to the body and therefore urine will be detected by the sensor more quickly. DO NOT use loose boxer shorts.
